FY2003 Request: \$400,000
Reference No: 35810

The Department of Fish & Game has identified several clean-up projects which include asbestos abatement, lead paint removal, and fuel spill assessments/cleanup. Some of the larger projects that cannot be initiated without funding in addition to annual deferred maintenance include the following.

Glenallen: The Glennallen storage building acquired from DOT contains friable asbestos in the heating pipe joints and valve insulation. The building is an "attractive nuisance" and has been broken into by unknown persons in the past. The asbestos needs to be abated and the building demolished before a trespasser is harmed creating a liability to the State. Estimated cost to abate the asbestos and demolish the building: \$200.0.

Kodiak: The department was given two buildings on the Coast Guard Base for use as storage years ago. The conditional use provided that the department demolish the buildings when no longer needed. Both buildings are now vacant and/or the structures are rotting and failing. Both buildings are "attractive nuisances" and environment sites with potential liability to the State. These buildings were painted with lead based paint which is now considered a hazardous substance.

The Coast Guard has tentatively agreed to provide clean-up design/demolition and allow us to use their term contract for hazardous material demolition. The Coast Guard requires reimbursement for the design and demolition costs.

Estimated costs for assessment, design and demolition are presently unknown but preliminary discussions with the Coast Guard indicate costs will likely be in the range of \$200.0.
